Founded in 2006 in response to the needs of the Department of Defense information and communications technology requirements supporting activities within Baghdad's International Zone (IZ), IZ Technologies (IZT) offers world-class experience in the design and implementation of telecommunication systems tailored to our clients' unique needs and environments. IZT has supported the development of capacities at the regional or sovereign state level, engaging at the ministerial levels of sovereign states as well as with "boots-on-the ground" US joint and coalition forces. IZT has provided services across the entire spectrum of combat, peace-keeping, and nation-building, from laying cable in support of military forces to engaging with foreign government officials at the ministerial level.
